
Version 0.972019-06-07

- * Support for Art-Net 4:
 - * Enabled by default.
 - * Replaces previous "independent universes" feature.
 - * In Art-Net 4 mode, the node does not expose a second virtual network interface.
- * Improved factory presets:
 - * Selection of start universe when loading a factory preset.
 - * User may choose whether he wants to adjust the network settings when loading a factory preset.
 - * Loading a factory preset has fewer side effects.
- * DMX buffers are flushed when protocol changes.
- * Relaxed DMX refresh rate by default.

Version 0.962019-05-14

- * Introducing simple user input locking in additon to password locking.
- * Fixed regression with non-zero start code sACN data packets.

Version 0.952019-05-02

- * Merging can now be turned off.
- * The refresh rate can now be changed between max. (ca. 44 Hz) and relaxed (ca. 30 Hz).
- * Fixed a merging bug that could leave the device in a state where it was impossible to send channel values to the outputs below a certain minimal level.
- * Reworked DMX generation engine.
- * Firmware version is now reported correctly via Art-Net.
- * Changed RDM buffers to correct size. The buffer size was low before, which could lead to crashes of the device.

Version 0.932018-05-17

- * Cleaner initialization.

Version 0.922018-05-16

- * Improved Art-Net and sACN network traffic filtering.
- * Optimized RDM table of device memory organization.
- * Changes to memory management.
- * Fix: Display content used to appear shifted occasionally.
- * DMX outputs are now turned off if low supply voltage is detected.
- * Improved displaying of fatal errors.

Version 0.912017-11-20

- * All RDM UUIDs and MAC addresses are now listed in the device info screen.
- * Improved display of network address information.
- * Changed memory management:
 - All dynamically allocated memory is now managed by a single heap.

Version 0.902017-11-07

* First release.
